DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

Regarding claims 1 and 2, prior arts do not disclose a data transfer system, comprising a combination of:

- (1) reciprocity time calculating means for calculating a maximum reciprocity time based on the measured propagation times, the maximum reciprocity time indicating the time in which the predetermined data is reciprocated for the end device farthest away from the management apparatus; and
- (2) reference value calculating means for calculating a reference value based on the maximum reciprocity time, the reference value being used to calculate a waiting time required when each device transfers the data.

Regarding claims 3 and 4, the prior arts do not disclose a data transfer management apparatus for managing the transfer of data transfer system including a plurality of the devices, each of the devices having a different rate for transferring the data and a different delay time for sending back data depending on the transfer rate, the devices being connected in a hierarchical branching arrangement including at least one intermediate device and at least one end device connected to the intermediate device, the data transfer management apparatus comprising a combination of:

- (1) reciprocity time calculating means for calculating a maximum reciprocity time based on the measured propagation times, the maximum reciprocity time indicating the time in

which the predetermined data is reciprocated for the end device farthest away from the data transfer management apparatus; and

- (2) reference value calculating means for calculating a reference value based on the maximum reciprocation time, the reference value being used to calculate a waiting time required when each device transfers the data.

Regarding claims 5 and 6, the prior arts do not disclose a method for transferring data in a data transfer system including a plurality of devices and a management apparatus for managing the transfer of data among the devices, the devices being connected in a hierarchical branching arrangement including at least one intermediate device and at least one end device connected to the intermediate device, each of the devices having a different rate for transferring the data and a different delay time for sending back data depending on the transfer rate, the devices being connected in a hierarchical branching arrangement including at least one intermediate device and at least one end device connected to the intermediate device, the data transfer method comprising a combination of:

- (1) measuring a propagation time between the management apparatus and each of the end devices by transmitting predetermined data to each of the end devices at the slowest transfer rate;
- (2) calculating a maximum reciprocation time based on the measured propagation times, the maximum reciprocation time indicating the time in which the predetermined data is reciprocated for the end device farthest away from the management apparatus; and
- (2) calculating a reference value based on the maximum reciprocating time, the reference value being used to calculate a waiting time required when each device transfers the data.

Conclusion

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
